

video editing. The device has mass storage capacity of 8 TB backed up by four 2 TB SATA II hard disks. Modular and hot-swappable components are easy to maintain in the field. The performance is supported by RAID-5 rebuilding, which prevents data loss and ensures video clips are secure. It offers flexibility with built-in multi-interface host connectivity and has cableless backplane design.

Tailgating Detection System

Audible alarm

Keyscan's tailgating detection system uses a curtain of 32 IR sensors to determine if more than one person has passed through a secure area on a single valid card read. The TDS triggers an audible alarm and activates an alarm relay that can be interfaced with an access control system. For high-security areas, the TDS adds an additional layer of protection against unauthorized access. Each system comes with a Keyscan reader that can be installed within the unit. *Keyscan Inc.*

Point-of-sale Software Real-time transaction viewing

Toshiba Surveillance & IP Video's Surveillix point-of-sale software features video text overlay for real-time transaction viewing. The software integrates with Toshiba Surveillix DVRs and provides retailers with control over mission-critical POS security applications. Advanced Event Search lets users analyze specific transactions types, items, and dates and times. Users also can export video containing overlaid POS transactions via JPEG or AVI video formats. POS display fonts can be customized with alternate types, colors and sizes for normal and alert displays. *Toshiba Surveillance & IP Video.*

Electronic Locksets Wireless communication

Alarm Lock's Trilogy Networkx Locksets (DL6100 and PDL6100) communicate wirelessly over any size network. The locksets are Grade 1 BHMA certified, support up to 5,000 users and 500 scheduled events, and have a 35,000-event audit trail. The battery lasts more than five years, powered using

Securing Your World

remote video monitoring with the
 highest IQ and the lowest TCO

manpower. technology. innovation.

Our best-in-breed remote video monitoring goes beyond traditional central station monitoring with the industry's most intelligent video and streaming audio over IP networks. Providing a seamless interface with analytic software systems and manned security. It's a unique fusion of manned security and technology that increases efficiency, limits risks and reduces costs for G4S clients. Our center is also one of a select handful to be awarded UL-827 certification for monitoring facilities. And since you choose the features, set the policies and specify the response, it's a perfect fit that helps you keep the focus on your business.
