

Applications for Attendance Tracking

TAP + KNOW™ technology delivers more trust in any environment.

Today, organizations must go beyond simple time and attendance tracking. Compliance, risk management and contact tracing are critical functions across industries such as enterprise and education.

rf IDEAS® extends our industry-leading WAVE ID® authentication technologies into innovative solutions that help to create a safer, more productive environment.

We make it easy to build trust and ensure transparency with solutions that provide seamless authentication via existing credential systems and protocols.

Applications for Attendance Tracking

Here are just a few of the ways that rf IDEAS® solutions deliver a clear advantage in safety, security and accountability.

USE CASES

Time & Attendance

Automatically and accurately capture employee, student or visitor credentials to analyze arrivals, departures or breaks. Know who's in the office, the classroom or logging into hourly timesheets for quick streamlined audits.

Event & Guest Management

User credentials provide simplicity and flexibility when tracking attendees at conferences, trade shows or other busy events that require easy to use, easy to deploy registration and crowd control.

Contact Tracing

Securely and effortlessly track employee attendance at required training sessions, seminars or mandatory events. Provide your staff assurance of contact tracing protocol all while protecting your liability.

INDUSTRIES

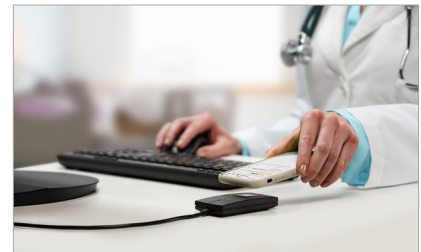

Education

Use WAVE ID® readers to instantly understand and unobtrusively track the on-campus arrivals and departures of students, faculty, administrators, parents and transportation providers.

Enterprise

Organizations of all sizes incorporate WAVE ID® readers as a critical element in their proactive contact tracing efforts. Positive cases can be traced from lobby to office, cafeteria to conference room, streamlining efforts to mitigate spread.

Healthcare

In environments where hygiene is always a major focus, authentication technologies can help minimize the risk of outbreaks while helping to protect healthcare professionals, patients and visitors alike across both high-risk areas and non-clinical settings.

Applications for Attendance Tracking

To support attendance tracking across all environments, rf IDEAS® offers a wide range of readers to fit your unique applications.

WAVE ID® Mobile

To support today's mobile workforce, our dual-frequency readers (125 kHz and 13.56 MHz) incorporate a Bluetooth® reader for on-the-go contactless authentication and seamless integration with existing reader networks. It's less touch, more trust in any environment.

WAVE ID® Plus

Our most feature-rich dual-frequency reader (125 kHz and 13.56 MHz) provides simultaneous processing of contactless and proximity smart cards. It delivers total flexibility and limitless possibilities for user identification and authentication.

WAVE ID® Nano

All the features of desktop and surface mount readers in a versatile, ultra-compact USB format that is ideal for embedding into laptops, tablets or monitor housings. Available in either 124 kHz proximity or 13.56 MHz contactless formats.
