rf IDEAS

FIVE WAYS rf IDEAS SIMPLIFIES
IDENTITY ACCESS MANAGEMENT

With higher security risks, a more mobile workforce and evolving regulatory requirements, how can **WAVE ID®** credential readers protect your devices, network and data while enforcing accountability and enhancing productivity?
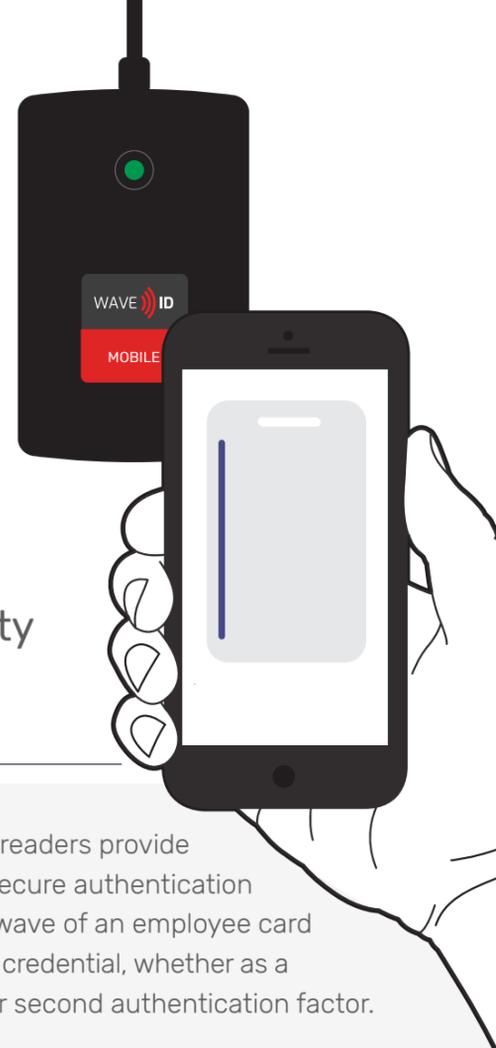

1 Error-free identification

90%
of passwords are vulnerable.[1]

All passwords are a pain to manage, remember and enter.

WAVE ID readers provide instant, secure authentication with the wave of an employee card or mobile credential, whether as a primary or second authentication factor.

2 Universal compatibility

100+
proximity card types.

60+
IAM vendors currently in the RFID market.[2]

WAVE ID readers are backward-compatible, future-ready, work with nearly every credential worldwide, and are supported by our extensive network of IAM solution partners.

3 Reliable security

$3.86 million
is the average cost of a data breach.[3]

Every device and all end points must be securely authenticated to protect the enterprise.

WAVE ID solutions enable enterprise-wide single sign-on, with secure access at workstations, printers, dispensing carts, field devices, home offices and more.

4 Easy configuration & management

Integrating **dozens** of credential readers

+

Managing a **distributed** enterprise can be a challenge.

WAVE ID readers are plug-and-play, offering simplified analysis/configuration, an SDK, and support for all your applications—including remote and mobile—through our extensive partner ecosystem.

5 Contactless authentication

Pathogens are transmitted through shared devices and spaces.

Touchless and remote readers help keep people healthy.

WAVE ID solutions are available to support **Bluetooth®** Low Energy technology, cloud-based management, and the world's leading mobile credential and remote security providers.

Who is rf IDEAS?

We are the leading innovator for logical identity access management solutions. With 25 years of industry expertise and an extensive partner network of IAM solution providers, we make possible simple, secure applications including single sign-on, secure printing, attendance tracking, mobile authentication and more.

Our **WAVE ID** contactless credential readers are trusted by users around the world in healthcare, manufacturing, government, education, finance, and other enterprises that benefit from network and data security, corporate and regulatory accountability, and efficient productivity.

For virtually any application, any credential, anywhere: Trust Begins Here.
