

How to run sample HTML and Angular examples of WebSDK.

HTML

Prerequisites:

1. Python-3.
2. Visual Studio Code with live-server extension.

Run the example: There are two ways to run it.

1. Run the following command: `python3 -m http.server`
 - Once the server is running, you'll see a message like: Serving HTTP on: `https://[:]:8000`
 - Replace `[:]` with `localhost` in the above URL.
 - Open your web browser and navigate to the modified URL (e.g., `https://localhost:8000`).
2. Use the live server extension of visual studio code and click on Go Live.

Angular

Prerequisites:

1. Node version v16.14.0

Run the example:

1. Navigate to the angular-example folder and run below command to install dependencies:
npm install
2. Navigate back to the angular-example folder and run below command to link the PcProxApi-WebSDK package:
npm link ../../PcProxApi-WebSDK/
3. Finally, serve the angular example:
ng serve
