

Solutions for Identification and Access

Powering the badge

In industry, nearly all employees wear ID badges. Traditionally, an ID badge is used for visual identity and/or building access. While many companies and institutions need to perform door access, they do not realize they can leverage their ID badge investment to solve log on, employee identification, or time and attendance functions. A single badge solution is a cost effective approach that should be leveraged.

"Our company has been so impressed. We've gone from one department to 50 departments using the RF IDEas pcProx proximity readers. We are making it an institutional standard."

-R. Owens, The University of Texas

pcProx® Enroll

The Enroll series is compatible with over 300 million physical access cards, giving the flexibility to use building access cards for other forms of identification and security throughout the workplace. These are true plug-n-play readers for 125 kHz proximity and 13.56 MHz contactless smart cards, are configurable and easy to deploy. All card formats are supported.

pcProx® 82 Series

Get started using your existing employee badge system for enhanced security and functionality with the pcProx 82 Series readers from RF IDEas. We help to facilitate the deployment of services like single sign-on (SSO) solutions by offering compatibility between the over 500 million different cards, tags and labels used for facility access.

pcProx® Playback

The pcProx Playback reader delivers user data from the contactless card or tag to the desired application, PLC or equipment. The playback reader can read data written to the card by the pcProx Writer or can be configured to read the card's data written by another source. This multi-application reader is configurable to read from any location on the card.

pcSwipe® Enroll

The RF IDEas pcSwipe intelligent magnetic stripe card reader is a cost-effective and efficient solution for customers wanting to leverage their existing base of magnetic stripe card-carrying personnel. In addition to solid construction and numerous flush mounting options, key features include bi-directional swiping capability and fast swipe speeds for maximum usability.

pcProx® Plus

The pcProx Plus is a cutting-edge card reader that combines proximity and contactless technologies into one single reader. With its dual-frequency multi-technology, the pcProx Plus is highly configurable and capable of simultaneously handling any two of the available technologies. It reads over 35 different card types, delivering flexibility to any customer, integrator, or end user struggling with different card technologies.
